

BUILDING NORTH AMERICA'S NEXT PRIMARY COBALT MINE

DEVELOPMENT-STAGE COBALT PROJECT

eCobalt is an advanced-stage, near-term primary cobalt producer. Our Idaho Cobalt Project ("ICP") is located in the historic Idaho Cobalt Belt, near the town of Salmon in east central Idaho.

As the only environmentally permitted primary cobalt project in the United States, the ICP has the potential to become a reliable and transparent source of supply for the growing cobalt market.

Significant project investment to date - \$135M from exploration to pre-construction- de-risks project execution and existing surface infrastructure provides fast track to production.

Critical path items for continued project development include:

- Finalize off-take agreements
- Complete new Feasibility Study
- Raise project financing

GROWING GLOBAL COBALT DEMAND

Currently, ~125,000 tonnes of cobalt is produced in the world per year. The market for cobalt is projected to grow at a CAGR of 7.7% over the next five years, tripling by 2030, primarily due to growing demand for electric vehicles. Countries like Germany, France, Japan and China have vowed to ban Internal Combustion Engines (ICEs) over the course of the next 10 to 20 years, driving the demand for cobalt for use in lithium-ion batteries.

DISTRICT-SCALE PROJECT POTENTIAL

Substantial land position in the historic Idaho Cobalt Belt

- Historic production from 1940s-1960s
- ~2M tonnes produced at 0.59% (WAVG)

Ram Deposit remains open along strike and at depth

- Extension of historic producing primary cobalt mine
- Ram only 7% of eCobalt's total 5990 acre land holdings

Objective is to grow the deposit and expand the district

- Existing historic resources at Sunshine and East Sunshine

SHARE STRUCTURE

As of 02/27/19

Shares Outstanding	160M
Options	10.8M
Warrants	18.8M
Fully Diluted	189.7M
Market Cap (at \$0.35/sh)	\$56M
52 week low/high	\$0.25-\$1.74
ADV (3 month)	315k
